

ABSTRACT

5. A speedometer (32), a fuel gauge (33), an odometer (34), left and right turn indicators (35L and 35R), and an ignition indicator 36 are arranged in a meter panel (31) of a meter unit (30). An IC tag (40) into which an ID code in standardized data form is registered is installed on the back surface of the meter panel (31). The IC tag (40) is resin molded and is installed on the back surface of the meter panel (31) made of resin. The mold resin and the meter panel (31) are both made of a resin material having transmissivity to electromagnetic waves.
